

Direct to Garment DTG

Specifications & Details

We use the latest Epson F2000 direct to garment print system which can give very fine quality print in an almost unlimited range of colours and details on practically any cotton based garment.

This service is a premium service.

To get the best possible print there are some points that must be considered:

- 1) We need the image that you want printed - AT PRINT SIZE - with a resolution of 300dpi. This should be supplied as a png file with a transparent background. We do not want an image of a t-shirt or any other background.
- 2) We cannot accept links from other competitors online websites. These sites are copyright protected and it is impossible for us to work from them reliably. Besides the quality of the image we would get is unworkable and not suitable for printing.
- 3) We do not accept files that we need to download.
- 4) If we receive files that would require editing, resizing or adjustments in any way, there would have to be a charge per image. This would be based on the time involved and could easily be in the range of \$25+ for each image.
- 5) Our standard print size - per side of a shirt - is 10" x 10" - i.e. 100 sq. inches. Oversized prints will carry a surcharge.
- 6) Print positions are normally front chest, centre back and sleeves. We do not print on the sides of the shirts, or under the arms. We can on occasion print lower back.
- 7) For technical reasons, we only print on garments that we supply, with this method of printing.

If there are any part of these requirements you do not understand please contact us by email or phone and we would be pleased to help.
